Date: February 12, 2001

Mr. Donald Thompson
U.S. Army Corps of Engineers
Huntington District
502 8th Street
Huntington, WV 25701

Dear Mr. Thompson:

Summaries of the 1983-2000 gypsy moth program conducted at five Army Corps of Engineers sites within the Huntington District are enclosed for your information (Table 1). Also enclosed are maps showing the trap locations at these sites (Figures 1-5). The purpose of the trapping program is to monitor low-level gypsy moth populations and help determine when more intensive survey methods should be employed.

There was little significant difference in trapping results at most of the sites this past year when compared to 1999. Delaware Lake is one site with a significant difference in trapping results this past trapping season. Delaware Lake trapped 9 male moths in 2000. This is a decrease from 74 male moths trapped in 1999. The trapping results at the Corps sites are fairly consistent with the Slow-the-Spread project trapping results in these areas of Ohio in 2000 (Figures 6-7). Based on these results, gypsy moth populations will not impact the forest resources at these Corps projects in the immediate future.

It is important that personnel at the Corps sites continue to look for other gypsy moth life stages such as larvae, pupae, and/or egg masses while performing their normal duties. Please visit our GM Digest web page for a list of publications that can be helpful with the identification of these life stages, as well as a good source for general gypsy moth information. The web address is:
http://fhpr8.srs.fs.fed.us/wv/gmdigest/gmdigest.html.

We would like to continue the trapping program at the same intensity in 2001. Thank you for your continued cooperation and if you have any questions regarding these results, please call Karen Felton at (304)285-1556.

Sincerely,

JOHN W. HAZEL
Field Representative
